

accuraspray HUB

Achieve consistent coating quality in thermal spray conditions with the **Accuraspray HUB**

The **Accuraspray HUB** centralizes spray booth data—pre-process configuration, in-situ measurements, and lab results—to identify and resolve process variability, equipment wear, and operator inconsistencies. By harmonizing spray parameters, maintenance records, in-flight characteristics, and lab data, it enables users to fine-tune tolerances for consistent, high-quality coatings.

User benefits

- Define and refine data-based process window quickly and effectively
- Reduce operational downtime
- Maintain equipment proactively
- Root cause analysis & troubleshooting
- Compare multiple booths effortlessly
- Track performance over time
- Visualize operator performance metrics

Safe data.
Strong IP.
Smarter innovation.
